

Small Satellite Technical Committee Student Paper Competition

The AIAA Small Satellite Technical Committee is proud to announce the Best Student Paper Competition at the 2024 AIAA SciTech Forum. Entrants will be judged by technical committee members and the judging will include both the written manuscript and the oral presentation. Full-time students at any academic level are encouraged to participate and eligibility requirements are defined by the AIAA and outlined at the top of this page. More details about the evaluation process can be obtained by contacting awards_chair@aiaa-smstc.org.

Students are encouraged to submit extended abstracts which demonstrate the maturity of the work. When submitting to the abstract submission website, select “Technical Paper” as the paper type. Note, do not select “Student Paper Competition” as you will not have the option to submit to Small Satellites. Please note in **bold** at the end of your extended abstract, ideally at the end of your “conclusions” section that you wish to be considered for the student paper competition. Semi-finalists will be chosen based on an evaluation of the extended abstracts. The results of the semi-final round will not be made public.

Deadline: Final student manuscripts must be uploaded to the conference manuscript submission website by 23:59hrs Eastern Time USE (EST-USA) on 12 November 2023 (this is earlier than the deadline for regular technical papers). Students who miss this November deadline will be removed from the student paper competition but may still be allowed to present in the oral session.
